1. **Checking equipment records (logbook)**
   Before carrying out leak checks, certified personnel must check the equipment records. These should indicate the F-gas charge, preferably also in CO₂ equivalents. Pay attention to any recurring issues and problem areas.

2. **Selection of measuring method**
   Indirect measuring methods should only be applied if the parameters analysed can be expected to give reliable information on the charge and the likelihood of leaks. Direct measuring methods are necessary to identify the exact location of the leaks. They may always be applied. Particular characteristics of the installation, e.g. ventilation of the environment, should be considered when selecting the most appropriate method.

3. **Checking for leaks using an indirect or direct method**
   The following equipment parts need to be systematically checked: joints, valves (including stems), seals (including seals on replaceable driers and filters), any parts of the system subject to vibration and connections to safety or operational devices.

**Indirect measuring methods**
- Visual and manual checks of equipment parts, safety and operational devices
- Analysis of the following parameters: pressure, temperature, compressor current, liquid levels, recharge volumes

If leakage is presumed, a direct measuring method must be applied for further examination and to identify the exact location (see Regulation (EC) No 1516/2007, Art. 7(3)).

When the above-mentioned parts of the equipment show no sign of leakage but a leak is suspected, other parts of the system must also be checked.

**Direct measuring methods**
- Checks using gas detection devices, or
- Checks using proprietary bubble solutions/soapsuds, or
- Checks through the application of UV detection fluid (or suitable dye) in the circuit (only if approved by the manufacturer, to be undertaken by holders of category 1 certificates)

Before pressure testing with a suitable pressure testing gas (e.g. Oxygen-Free Nitrogen), the refrigerant must be recovered from the whole system by personnel holding the appropriate certificate.

4. **Repairing leaks**
   Detected leaks must be repaired as soon as possible. Where necessary, the repair must be preceded by a pump-down or recovery and followed by a leakage test (see above). The cause of the leak must be identified to avoid recurrence.

5. **Follow-up check**
   After leaks are repaired, a follow-up leak check has to be carried out within one month and follow the above requirements. Please consider especially areas where leaks were found and any areas where stress was applied during the repair.

6. **Updating equipment records**
   Equipment records must be updated after each leak check.

Stationary refrigeration, air conditioning (AC) and heat pump equipment containing fluorinated greenhouse gases

Introduction
Fluorinated gases (F-gases) are potent greenhouse gases and include hydrofluorocarbons (HFCs), which are commonly used as refrigerants. Regulation (EU) No 517/2014 (the "EU F-gas Regulation") came into force in 2015 and aims to strongly reduce emissions as a substantial contribution to the EU’s efforts of reducing climate change.

Who does this leaflet address?
This leaflet is intended for technical personnel and companies working with F-gases in refrigeration, AC and heat pumps. It provides information and guidance on the most relevant obligations, but is not of any binding or legal nature.

To account for the climate impact of F-gases, obligations are based on CO₂ equivalents. A conversion tool from metric units is available (see below under “More information”).

Which are the relevant activities?
The following activities concerning stationary refrigeration, AC and heat pump equipment as well as refrigerated trucks and trailers can only be carried out by personnel and companies holding the appropriate certificate.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Certified personnel</th>
<th>Certified company</th>
</tr>
</thead>
<tbody>
<tr>
<td>Installation</td>
<td>✓</td>
<td>✓*</td>
</tr>
<tr>
<td>Maintenance or servicing</td>
<td>✓</td>
<td>✓*</td>
</tr>
<tr>
<td>Leak checking of applications containing ≤5 t CO₂ eq of F-gases (≥20 t CO₂ eq if hermetically sealed and labelled as such)</td>
<td>✓</td>
<td></td>
</tr>
<tr>
<td>Recovery of F-gases</td>
<td>✓</td>
<td></td>
</tr>
</tbody>
</table>

*Not needed for refrigerated trucks and trailers and work not done for third parties

How to obtain a certificate
Personnel
There are 4 different categories of personnel certificates:

<table>
<thead>
<tr>
<th>F-gas charge</th>
<th>Stationary refrigeration and AC</th>
<th>Refrigerated trucks and trailers</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤5 t CO₂ eq</td>
<td>≤50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
<td>≤50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
</tr>
<tr>
<td>≥50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
<td>≥50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
<td>≥50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
</tr>
</tbody>
</table>

Activities permitted

- Category I
  - R = Recovery
  - I = Installation
  - L1 = Leakage check including breaking into refrigeration circuit
  - L2 = Leakage check without breaking into refrigeration circuit

- Category II
  - ✓

- Category III
  - ✓

- Category IV
  - ✓

To obtain a certificate, personnel must pass a theoretical and practical examination organised by a designated evaluation body.

Companies
To obtain a certificate for installation, maintenance or servicing activities, companies must fulfil certain minimum requirements:
- Employ certified personnel for the relevant activities in a sufficient number to cover the expected volume of activities, and
- prove that the necessary tools and procedures are made available to the personnel.

Certificates issued in one Member State are valid in all Member States.

How to check for leaks
Stationary refrigeration, AC and heat pump equipment containing ≤5 t CO₂ eq of F-gases or more (≤110 t CO₂ eq or more if hermetically sealed) must be regularly checked for refrigerant leakage by certified personnel.

<table>
<thead>
<tr>
<th>Minimum frequency of leak checks</th>
<th>Stationary refrigeration and AC</th>
<th>Refrigerated trucks and trailers</th>
</tr>
</thead>
<tbody>
<tr>
<td>≤5 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
<td>12 months</td>
<td>6 months</td>
</tr>
<tr>
<td>&gt;50 t CO₂ eq (hermetically ≥10 t CO₂ eq)</td>
<td>24 months</td>
<td>12 months</td>
</tr>
</tbody>
</table>

Without a properly functioning, appropriate leakage detection system in place

- Leak detection system mandatory
- 12 months

With a properly functioning, appropriate leakage detection system in place

- 12 months
- 12 months
- 6 months
- 24 months

* Leak detection systems must be checked every 12 months to ensure proper functioning.

Other mobile equipment such as refrigerated vehicles (besides trucks and trailers) or ships as well as all mobile AC are not required to be checked for leaks.
